

Millimetre and Sub-millimetre Astronomy Antarctic Centre

Giorgio Sironi

Physics Dept. - University of Milano Bicocca - Milano, Italy

Abstract.

A Working Group has been created to study the feasibility of ACMSA: Antarctic Center for Millimetric and Sub-millimetric Astrophysics, an international facility based at Dome Concordia (Dome C).

1. Introduction

Test made over the last ten years show that the Antarctic Plateau, an elevated and extended area, characterized by thin, dry and stable atmosphere, is the most convenient place for ground based observations of the sky at mm and sub-mm wavelengths. Better conditions can be found only in space (for a review see e.g. AA.VV. 2003).

2. ACMSA: Antarctic Center for Millimetric Sub-millimetric Astrophysics

Facilities for mm- sub-mm astronomy on the Antarctic Plateau have been so far available only at the Amundsen Scott base at South Pole, but are insufficient to satisfy the international community needs. To complement South Pole, group of astrophysicist from Europe, Australia and USA (Olmi 2003) recently suggested the creation of a new mm and sub-mm facility at Dome C. Here the expected observing conditions are even better than at South Pole and the French - Italian Dome Concordia base will soon become operational all year round.

3. Working Group

To prepare a proposal for ACMSA a Working Group (WG) has been formed. The aim is a scientific and technical case which will: i)investigate how selected astrophysical and cosmological questions can be converted into coherent frontier science at sub-mm wavelengths, ii)propose facilities and experiments, iii)review existing facilities and experiments on the Antarctic Plateau and elsewhere, iv)study the state of the art technology available and the use of robotized systems, iv)make cost evaluation. The WG will: a)inform the scientific community at large, b)look for collaborations, c)search links with national and international organizations (French - Italian Concordia Program, European Polar Board, SCAR, IAU Antarctic Working Group, ESO, NSF etc.)
